

# MyTalipapa

Public-Market Navigation & Stall-Management System

---

## Data Flow Diagrams

### System & Management

*Yourdon–DeMarco notation*

System Design Documentation · Version 1.0 · June 2026

## DFD Level 0 — Context Diagram

The context diagram models the whole MyTalipapa system as a single process (0) and shows the data exchanged with each external party. It fixes the system boundary — who interacts with the system and what flows in and out — before any internal detail is shown.

## DFD Level 1 — System Decomposition

Process 0 opens into the six processes that run the system, the seven data stores they read and write, and the flows between them and the external entities (Shopper, Renter, Contractor, Admin, Notification Gateway).

- 1.0 Manage Accounts & Authentication
- 2.0 Process Applications & Approval
- 3.0 Manage Stalls & Contracts
- 4.0 Navigate & Find Stalls
- 5.0 Process Payments
- 6.0 Send Notifications

## DFD Level 2 — Process 2.0 Applications & Approval

Process 2.0 is decomposed into the stall-application lifecycle: a renter submits an application, a reviewer validates it and records a decision with a reason, rejected renters may appeal, and approved applications proceed to payment and occupy the stall.

- 2.1 Submit / Resubmit Application
- 2.2 Review & Validate
- 2.3 Record Decision (approve / reject)
- 2.4 Handle Appeal / Resubmission
- 2.5 Initiate Payment & Occupy Stall

## DFD Level 3 — Process 2.2 Review & Validate

The review process is broken into its primitive steps: the applicant record and documents are checked, the target stall's availability is verified, the case is presented to the reviewer (contractor or admin), and the decision is captured together with its reason.

- 2.2.1 Check Applicant Record & Documents
- 2.2.2 Verify Stall Availability
- 2.2.3 Present to Reviewer
- 2.2.4 Capture Decision & Reason
